Power BI (Specific Purpose)

Python:

1. General Purpose Language:
   - * Application Developers. (web | mobile | Gaming etc)
   - * Networking & Hacker Experts. (socket programming)
   - (Excel) ⇒ * Maths & Statistics Experts.
   - * Data Analyst | Data Science | AI Experts.

2. Easy to learn & use.

3. Open Source language (eg Apache).
   ⇒ source code is available.
   Free to use & Distribute.

4. Dynamically typed language.
   int i = 10 ↵ = i = 20 ↵ i = 'abcd' ↵
   (No - Declaration of variables)
   i = 10 ↵
   i = "Hello" ↵
   i = True.

5. Interpreter Based language:
   Print("Hello world") ↵
   - Scripting language:

Compiler based language (
eg: C, C++, Java, .net.
#include <stdio.h>
main()
{
printf("Hello world")
}.

Save
↓
Compile
↓
Execute

Java

Python.

Pythoneer (or) Pythonist.
↓
Programme to find factorial
input = 5.
output 5 × 4 × 3 × 2 × 1 = 120.
↓
n = ~~5~~ ~~4~~ ~~3~~ ~~2~~ ~~1~~ 0.
t = ~~1~~ ~~5~~ ~~20~~ ~~60~~ ~~120~~ 120
while n >= 1.
t = t * n.
n = n - 1.
print(t)

Java + Python ⇒ Jython.
Iron Python etc.
(.net + Python)

⇒ Python!
↓
math. ✓.

```
import math as m.
m.factorial(5)
↓
120
```

6. Integrated any programming language

7. Huge Built-in libraries
   Ready to use function | classes

Numpy | Scipy
Pandas | Polars.
matplotlib | Seaborn
Sklearn | Tensorflow | Keras | Pytorch.
NLTK | TextBlob.

History: 1990 - 2015
Guido Van. → ABC language
Creator: Rossum. ← inspired. Simple
